

RISK COMPASS

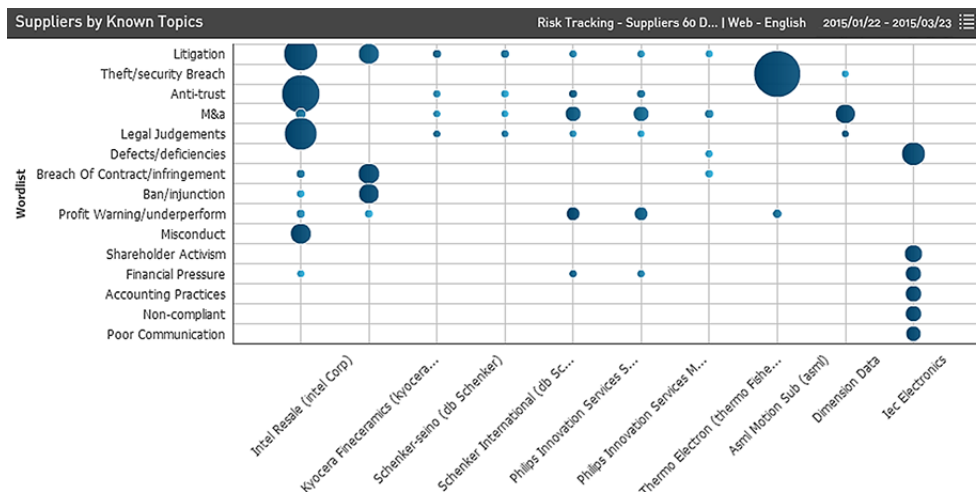

REAL-TIME RISK MANAGEMENT SOFTWARE

The only software able to identify public domain rumour, speculation & risk discussion about the high-value people and companies essential to your business. In real time.

Key Points

- Track in real-time the companies and individuals you care about (e.g. your supply chain) for potential risk globally
- Software monitors all public domain data across millions of news, blog and social media sources for risk
- Results are delivered via a secure online dashboard, and daily email report for up to three people
- Track 100 companies or individuals for 6 months for £5,000. (Can scale to track lists up to 100,000+ in real-time.)

Live example:

Proof Points

- A financial regulator uses this software to track rumors of deals before they are officially announced, including postings that may contain leaks of inside information.
- A leading Fortune 100 Accounting Firm uses this on-demand application to quickly assess risk across their clients' entire supply chains, enabling internal and external audit to spot and surface potential issues anywhere in the world.
- A hospital operator uses this cloud-based software to spot customer service issues, potential wrongdoing, and prioritize their investigation efforts on those centers at greatest risk.
- A global energy company uses this software to identify early warning signals about protests, and operational issues (outages, accidents, security threats, etc) across their worldwide portfolio of sites.

About Polecat

Polecat was established in 2007 and pioneered MeaningMine™ as a proprietary advanced digital analytics platform to mine the global digital landscape of online and social media - in real time and in multiple languages. MeaningMine™ uses automation combined with a customized taxonomy of keywords and powerful visualisation to deliver strategic and operational risk intelligence for business, government, international institutions, civil society and beyond. www.polecat.com
